Data science with R: tidyverse

V Data Visualize: ggplot2

Assignment

Create R script called assignment_5.R. In this assignment we will test our ggplot2 skills!

Exercise 1

In the first exercise try to re-create plot as seen on Figure 1. Some guidelines:

- use **hflights** data set
- find top 4 carriers (total number of flights)
- draw density plot for variable "distance"
- each carrier has its own density curve
- fill density area with different colors
- scale fill colors with "Viridis" color palette
- all densities are drawn in the same plot
- use transparency for fill colors
- remove the outliers: distance < 2000
- \bullet use theme_minimal
- you can tweak some theme parameters (seen from the plot)
- export your final plot

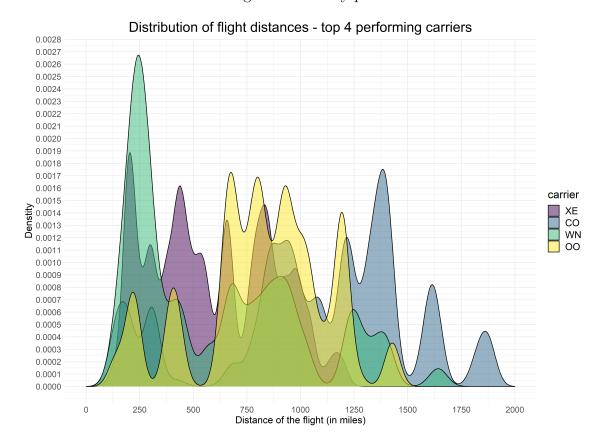

Figure 1: Density plot

Exercise 2

In the second exercise we will create plot as seen on Figure 2. Some guidelines:

- use diamonds data set (from **ggplot2**)
- randomly select 10000 diamonds
- create new variable volume = x * y * z
- now keep only diamonds with:
 - carat < 2.5 and
 - price < 15000 and
 - -volume < 600
- use your data to create scatter plot
- on x axis put "carat"
- on y axis put "price"
- size of the dots is represented with "volume"
- for color of the dots use diamond "cut"
- create facets using **facet_wrap** and diamond "color"
- you can tweak some theme parameters (seen from the plot)

• export your final plot

Diamond price by weight, volume, cut and diamond color 15000 15000 15000 10000 10000 10000 5000 5000 5000 0 volume 2.0 2.0 1.5 0.5 1.0 1.5 1.0 0 G Н 100 Diamond price (in USD) 15000 15000 15000 200 300 10000 10000 10000 400 cut 5000 5000 5000 Fair Good 0 0 Very Good Premium 0.5 0.5 1.0 1.5 2.0 0.5 1.0 1.5 2.0 1.0 1.5 2.0 2.5 J Ideal 15000 10000 5000 0.5 1.0 1.5 2.0

Diamond weight (in carats)

Figure 2: Scatter plot

Exercise 3

In this exercise we will create a word cloud (Figure 3). The guidelines are:

- use corpus.txt data set from the assignment 3
- clean the corpus (as we did before)
- prepare a table called "corpus.words" (as we did before)
- keep only 200 most frequent words
- now use table "corpus.words" to draw word cloud
- each word is shown on the word cloud
- "count" frequency represents the size of the word on word cloud
- words are put into different groups based on the first letter in the word:
 - group a first letters: "a" "b" "c" "d" "e"
 - group b first letters: "f" "g" "h" "i" "j"
 - group c first letters: "k" "l" "m" "n" "o"
 - group d first letters: "p" "q" "r" "s" "t"
 - group e first letters: "u" "v" "w" "x" "y" "z"
 - group f for all other characters!
- use groups for word colors
- export your final plot

Figure 3: Word cloud

Exercise 4

In the fourth exercise we will create plot as seen on Figure 4. Some guidelines:

- ullet use pjm_hourly_est.csv data set from the assignment 4
- we will draw time series for
 - hourly energy consumption
 - daily averages energy consumption
 - weekly averages energy consumption
- create three time series sub plots with **cowplot**
- additional you can tweak some theme parameters (seen from the plot)
- export your final plot

Hourly energy consumption Megawatts (MW) 50000 40000 30000 20000 60000 2005 2010 2015 Time stamp - hour Average daily energy consumption (smoothed) 50000 Megawatts (MW) 40000 30000 20000 2015 2005 Date Average weekly energy consumption (smoothed) Wedawatts (WW) 40000 35000 35000 25000 Week
